

Company Profile

Ever since the founding of the company in September 1945, the core focus of Daiken business has always been the development and provision of materials for residential housing and construction. Daiken has continued corporate activities that cover a broad and diverse range, including the manufacturing and sales of materials for residential housing and construction as well as materials for industrial use, activities that have led Daiken to grow into one of the world's foremost comprehensive manufacturers of building materials.

Through its highly motivated research and development, Daiken is continuously working with the latest materials, concepts and technologies. With a core of technological and material-supply capabilities for building materials, the very basis for the housing field in which Daiken specializes, Daiken shall continue to provide its customers with new generations of technologies and products.

A Message from the President

We herein present our shareholders and related persons with a report on the consolidated business results for Daiken Corporation in fiscal 2007.

Business Progress and Results

For the consolidated business results for the year in review, we achieved sales totaling ¥166,588 million (a decrease of 1.0% compared with the previous year), an ordinary income of ¥2,613 million (a decrease of 45.2% compared with the previous year), and a net income of ¥791 million (the net loss for the previous year was ¥4,338 million).

The global economy was steady during the first half of the year in review, but in the second half, there was a slowdown in the US economy due to the subprime loan problem, and the continuing sharp increases in crude oil prices which have continued from the previous year have deeply affected the actual global economy. For the Japanese economy as well, the effects of increases in material and energy prices brought about by the sharp increases in crude oil prices, as well as the effects of the strong yen, are resulting in a gradual decline in corporate earnings, bringing the economy to a standstill. As for the residential housing industry, sharp increases in material prices, including crude oil, petro-chemical products, and plywoods, have continued from the previous year, and revisions to the Building Standards Law in June 2007 have brought about a sharp decrease in the number of new housing starts. This has created a severe business environment for the industry.

Under these conditions, the Daiken Group is starting to

construct a business structure that does not rely solely on new housing starts, and we are also working to strengthen our business related to eco-friendly materials that can be used as plywood substitutes, including insulation board, Dai-Lotone, MDF, Dailite, and hard board. We are creating new markets by expanding sales and developing applications for the remodeling market and the commercial market. In parallel with these efforts, we are also promoting reforms to our profit structure, such as the establishment of new manufacturing facilities (biomass boilers) that are not affected by crude oil prices.

Through these efforts, we have been steadily expanding our ecomaterials business, but have been unable to avoid the effects of decreasing profits brought about by increasing costs and toughening competition.

Aiming to Be a Pioneer Resource Cycling Company

We can anticipate that the business environment will continue to be unpredictable. Under such conditions, the Daiken Group shall continue to take "environmentally-based production" that is friendly to both the earth and humankind as its key concept as we expand applications for eco-materials, the DNA of the Daiken Group, and continue to develop demand for our products in fields other than residential housing.

This year marks the 50th anniversary of the start of our production of insulation board (product name: Daiken Board) that efficiently uses wood resources without waste. This year, we are putting even greater

effort into eco-materials that use recycled materials and previously untapped materials as the primary raw materials, and into expanding sales for various types of products that utilize these eco-materials. Thus, we are aiming to further establish our corporate presence and business results as a pioneer resource cycling company.

As a follow-up to our insulation board, Daiken is also working to develop environmentally friendly fundamental materials that use recycled materials and previously untapped materials as the primary materials. These include MDF (product name: Tec-wood) and volcanic silicate and mineral fiber laminated board (product name: Dailite).

In parallel with this material development, the Daiken Group is also striving to realize ideal residential living environments that provide safety, peace of mind, and comfort, always taking the lead in efforts to improve residential housing quality. Based on the eco-materials and spatial performance that we have been fostering over many years, the Daiken Group aims to create the types of comfortable residential housing that society demands.

Issues and Policies for the Current Fiscal Year

We can anticipate that there will be a further deceleration of the economy in Japan due to a slowdown of the US economy and long-term sharp rises in crude oil prices. Although the number of new housing starts has not decreased as it did in the previous year, the level remains low, at the 1.1 million home level. Further sharp increases in crude oil prices and plywood prices are expected in the current term, so the business environment will likely become even more severe.

Under such conditions, our Group is working to construct a business structure that does not rely solely on new housing starts, and to further promote reforms to our profit structure. Specifically, we are utilizing the experiences and expertise we have fostered through our alliances with TOTO and YKK AP to put even greater effort into increasing demand in the remodeling market, for which future growth is expected. We are also creating and expanding engineering business and nonresidential housing markets, such as store and facility markets, and are strengthening our efforts to develop overseas markets in countries such as China and India.

In regard to demand for new housing starts, we are working from a base of eco-material products and high functionality products, utilizing the business strengths of the Group to aggressively develop new customers and expand markets.

Conversely, although considerable increases in raw material costs are expected, we are working to establish suitable selling prices for some of our products, to aggressively promote overseas procurement, to achieve cost reductions in various areas, and to implement rationalization measures in order to absorb these cost increases.

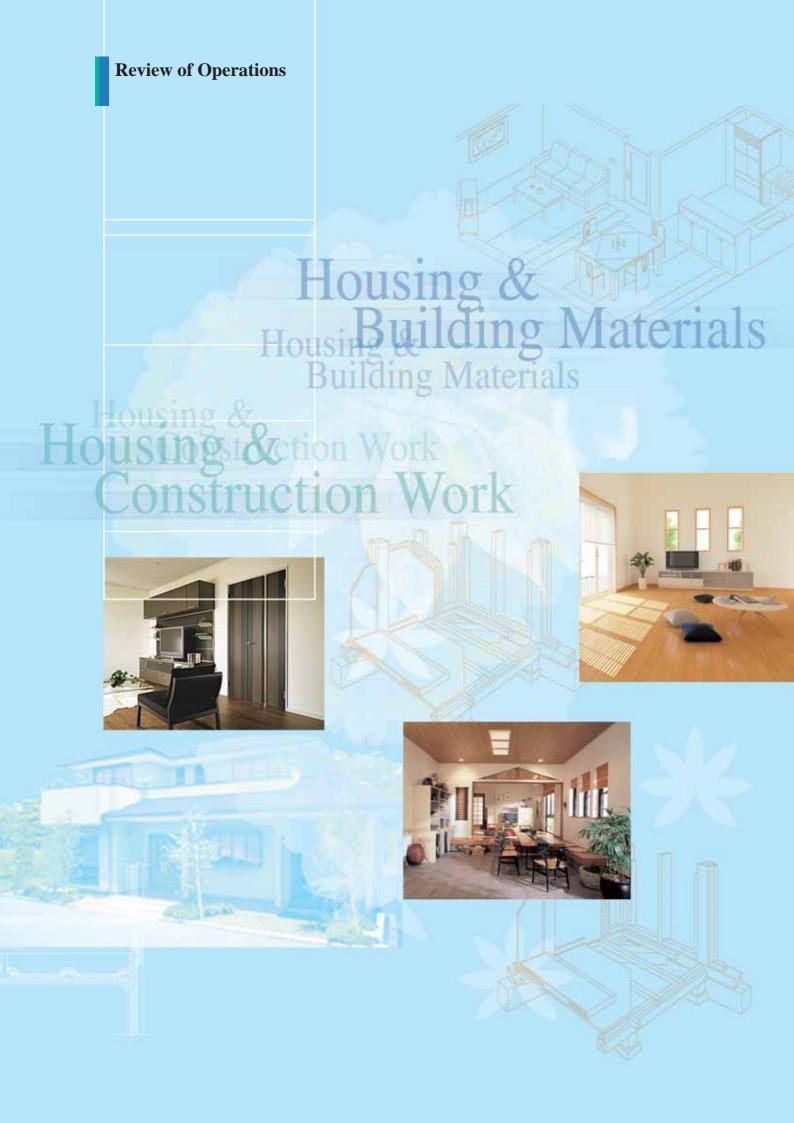

We hope that we may continue to look forward to the support and encouragement of all of our shareholders.

June 2008

Ryoji Sawalii

Ryoji Sawaki, Representative Director, President Chief Executive Officer

Housing and Building Materials Related Business

Net sales in this field for the year in review totaled \(\frac{\pmathbf{140,223}}{140,223}\) million (a decrease of 1.8% compared with the previous year), and operating income totaled \(\frac{\pmathbf{2}}{2,423}\) million (a decrease of 49.2% compared with the previous year).

In the residential housing industry, we faced cost increases due to the sharply rising prices of raw materials such as plywood and crude oil, and the rising prices of secondary materials. The number of new housing starts also declined, creating even stronger marketing competition. As a result, the market environment has been one in which profits have been severely constrained.

In regard to business related to eco-materials used as substitutes for plywood, Daiken acquired Kaihatsu Board Corporation in April 2007 (in April 2008, the company name was changed to Aizu Daiken Corporation). With this acquisition, we were able to increase our supply of insulation board (IB), resulting in an increase in sales of 16% compared with the previous year. The sales of MDF, a plywood substitute for which there is increasing demand, and for which price revisions have been implemented, also increased by 9%. As for Dailite, although the number of new housing starts has decreased, we could achieve nearly the same level of sales as the previous year by promoting the use of load bearing face

materials by builders who look at the importance on anti-earthquake performance and durability, and by introducing a new product, "Sarariart", a humidity regulating wall material made with Dailite.

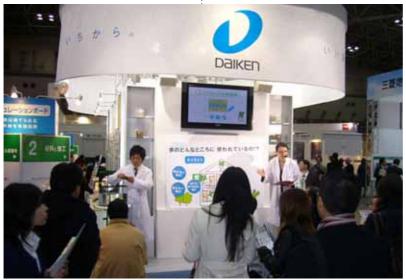

In June 2007, Daiken also began operating biomass boilers at Okayama Daiken Corporation and Takahagi Daiken Corporation, manufacturing bases for ecomaterials, in an effort to reduce energy-related costs and decrease the emission of greenhouse gases. As a result, Daiken could achieve

The Daiken booth used living space exhibitions to present remodeling ideas for end users.

Biomass boiler that went into operation at Okayama Daiken Corporation in May 2007

The Daiken booth at the Eco-Products 2007 Eco Style Fair
Daiken participated in the Eco-Products 2007 Eco Style Fair, which was held on the three days from
December 13 to 15, 2007, at Tokyo Big Sight. More than 165,000 people visited the fair, including business
representatives, general consumers, and representatives from environmental NPO and NGO groups. The fair
provided an excellent venue for Daiken to promote the environmental efforts being made by the company.

a higher reduction, approximately 16%, than the target set by the Kyoto protocol for greenhouse gas emission (a reduction of 6% compared with 1990) in 2007, and this reduction was even achieved one year earlier than the corresponding period (fiscal 2008 to 2012).

In the area of home furnishing and equipment such as doors and storage units, Daiken has been able to maintain nearly the same level of sales as the previous year by introducing new products such as products designed specifically for apartments and condominiums, the "Relief Art Series" that uses "Uzukuri" tone

sheets, "Stylish Furniture MiSEL" system storage units that provide ideal storage for large-screen flat-panel televisions and which can be used in various combinations.

In the area of interior materials, flooring materials in particular, Daiken has strengthened its marketing and sales of the high-functionality flooring materials, products in which we specialize, and we have also begun marketing "Donauart Slim 6T", an environmentally friendly flooring material that greatly minimizes the load placed on the environment thanks to the use of a special MDF material developed by Daiken. In these ways, Daiken

has been working to strengthen its lineup of products that meet market needs, allowing Daiken to maintain sales at nearly the same level as the previous year.

Business efforts have focused on the expansion of sales of "Kabe-Taisho", an earthquake proofing modification product for the remodeling market, and we have also been working to develop new sales channels that target remodeling specialists. As a result, we realized a large increase in sales in the area of remodeling business, 26%, compared with the previous year.

Housing and Construction Work Related Business

Net sales in this field for the year in review totaled \(\frac{\cupe26,364}{26,364}\) million (an increase of 3.3% compared with the previous year), and operating income totaled \(\frac{\cupe4473}{4473}\) million (an increase of 78.3% compared with the previous year).

Our construction work related business was supported by a

favorable apartment and condominium market, and an increase in orders for interior finish work in apartments and condominiums resulted in a large increase in sales. In the area of housing construction, however, a decrease in orders for custombuilt housing resulted in a decrease in sales.

Notes Related to Consolidated Financial Statements

Daiken Corporation and Consolidated Subsidiaries March 31, 2008

Summary of significant accounting policies

1. Inventories

Inventories of the Company and its consolidated subsidiaries are stated principally at cost, as determined by the moving average method. For the partly-finished work, a separate method is applied to the cost basis.

2. Securities

Held-to-maturity securities are carried and calculated by the amortized cost method (straight-line method). Marketable securities classified as other securities are carried at fair value, based on market prices on settlement date of accounts, with any changes in unrealized holding gain or loss directly charged to net assets. Cost of securities sold is calculated principally by the moving average method.

3. Method of calculating the depreciation of important assets to be amortized

1) Property, plant and equipment

At Daiken Corporation and its domestic consolidated subsidiaries, the depreciation is primarily computed by the declining-balance method, with the exception of buildings (excluding attached fittings and structures) acquired on or after April 1, 1998, the depreciation of which is computed by the straight-line method. The foreign consolidated subsidiaries use the straight-line method to calculate depreciation.

The principal estimated useful lives are as follows:

Buildings and structures mainly 3 to 60 years

Machinery, equipment and vehicles

mainly 4 to 15 years

2) Intangible assets

At Daiken Corporation and its domestic consolidated subsidiaries, the depreciation of intangible assets is computed by the straight-line method. The foreign consolidated subsidiaries use the straight-line method to calculate depreciation in conformity with the accounting principles generally accepted in their corresponding countries. Expenditures related to computer software for internal use are amortized by the straight-line method over their estimated useful life in the company, a 5-year period.

4. Provisions and allowances

specific circumstances.

Allowance for doubtful accounts
 In order to prepare irrecoverable accounts such as accounts and loans receivable, provisions for doubtful accounts are generally made on the basis of historical default rates. Claims whose possibility of collection is deemed doubtful are provided for in the expected uncollectible amounts, giving due consideration to the

2) Provision for bonuses
In order to prepare primarily for the payment of
bonuses to employees, provisions are based on the
expected amounts of payment.

- 3) Allowance for restructuring costs and losses In order to prepare for losses on business restructuring, provisions are made based on the estimated costs and losses at the term end.
- 4) Provision for product warranties
 In order to prepare primarily for the payment of
 expenses expected to occur after the delivery of
 products, provisions for estimated repairing costs
 during the term of warranty are made.
- 5) Provision for retirement benefits
 Provisions for employees' retirement benefits are made
 in the amount deemed necessary at the term end, based
 on estimated retirement obligations and plan assets.
 (Regarding the company pension plan, a prepaid
 pension expense has been appropriated, as the value of
 the pension plan assets exceeds the amount of the
 retirement benefit obligation as adjusted for
 unrecognized prior service cost and net unrecognized
 actuarial gain or loss.)

Prior service cost is amortized in the year in which the gain or loss is recognized by the straight-line method over the estimated average remaining years of service of the eligible employees (mainly 3 years).

Net unrecognized actuarial gain or loss is amortized commencing the fiscal year following the consolidated fiscal year in which the gain or loss was recognized by the straight-line method over the estimated average remaining years of service of the eligible employees (mainly 10 years).

5. Leases

Finance leases, other than those for which the ownership of the leased asset is to transfer to the lessee, are accounted for by a method similar to that applicable to ordinary operating leases.

6. Consumption tax

Consumption taxes and local consumption taxes withheld and/or paid are not included in the accompanying statements of operations.

7. Depreciation of goodwill and negative goodwill

Consolidation goodwill related to Kaihatsu Board Co., Ltd. is amortized by the straight-line method over 5 years. The depreciation for other subsidiaries is computed by the straight-line method over 20 years.

Notes Related to Consolidated Balance Sheets

1. Accumulated depreciation of property, plant and equipment

¥ 59,084 million

2. Assets pledged as collateral

| Buildings and structures | ¥ | 2,085 million |
|--|--------|----------------------------|
